BEYOND A COMPETITION

Inferno Racing was not formed to enter a competition. We are grade 11 and 12 students, and we chose to treat STEM Racing as an engineering challenge rather than an activity — a full enterprise simulation that demands financial planning, brand building, stakeholder management, risk analysis and long-term strategy.

Plenty of teams enter this competition on enthusiasm alone. We decided early that enthusiasm would not be our advantage. Structure would.

Every member of Inferno Racing believes the same thing: engineering and innovation are not only about speed. They are about precision, hard work, teamwork and constant improvement.

We set out to represent The Shishukunj International School and our city, Indore, at the highest level of this competition — and to show younger students that STEM is not just something you study. It is something you use.

THE NAME

We wanted a name that carried our values: innovation, passion, presence. The idea started with The Flash — but not the red suit or the lightning bolt. What drew us in was what sat underneath. Controlled speed. Speed backed by intelligence.

Barry Allen is not just fast. He is analytical. He reads his surroundings, weighs the risk, takes the problem on and learns from every setback. That mix of speed and thought was exactly how we wanted to approach STEM Racing.

We dropped the names taken straight from the character — they felt unoriginal and the team never fully agreed on them. So instead of borrowing the character, we took the idea behind it. Inferno carried all of it: heat, energy, power under control.

THE COLOUR SCHEME/THEME

Colour is the fastest way a brand gets recognised. It sets a mood before a single word is read, so we needed a palette that matched our identity and held steady everywhere we appeared — car, jersey, pit display, portfolio, feed.

BLACK- #262424	ORANGE- #FA5B14	YELLOW- #F99527	WHITE- #FFF6DE

TEAM LOGO

Our logo uses an orange flame palette for speed and energy. The dark ground lifts the contrast and reads as power and precision, while the stylised 'R' folded into the flame suggests motion and airflow. One mark, carrying both the engineering and the competitive side of the team.

TEAMWEAR

Our jersey does two jobs at once: it carries our sponsors and it carries us. Lenovo and Royal Enfield, as principal partners, take the most prominent placement. The base is charcoal black to match our palette, with a chequered flag running down the sleeves — a small nod to racing heritage that keeps the whole thing minimal rather than busy. Our name sits large enough to read across a pit hall.

Beyond how it looks, the jersey is a signal. Five people, one identity — telling judges and competitors that Inferno Racing turned up organised.

TEAM SLOGAN

Everything we do comes from wanting to be better than last time, and eventually the best.

Design — our commitment to serious CAD and CFD work, building a car that balances raw speed against aerodynamic stability.

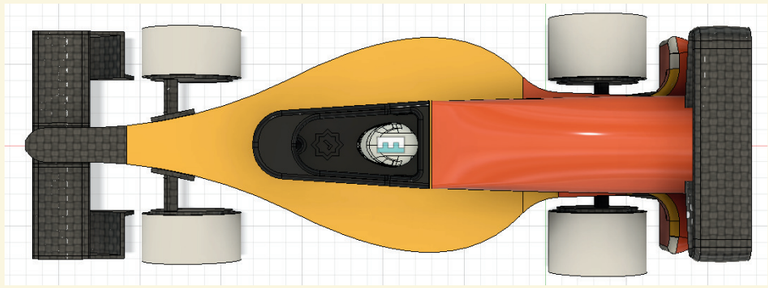
Develop — where theory becomes real. A rigorous R&D phase where components get prototyped, tested and refined.

Dominate — the goal itself. Not just to compete, but to set the benchmark.

Three stages, one habit: every decision we make is calculated and driven by data.

THE CAR COLOUR SCHEME

The inferno racing colours have been ben derived from a flame for inferno stands for an uncontrollable, strong fire with orange and yellow representing the flame while black represents the soot caused by the flame for as long as their is fire their is smoke. We used this theme while finishing our car also by choosing to have to car go from black to yellow to orange just like a flame.



MARKETING

STRATEGIC OVERVIEW

Our marketing has to do two things that usually pull against each other: feel high-energy, and read as professional. Every post carries both our values and the work behind the car.
We lean on trending formats and clean visuals to hold an audience across a nine-month season, while building a network of industry contacts along the way. It is not only about the racing — it is about the story behind it, from late-night R&D sessions to the final build.
We want every partner to know they are getting real exposure, and every follower to feel like they are watching a team worth watching.

TARGET AUDIENCES

Students — STEM enthusiasts and peers

- Show real STEM and racing career paths
- Share student-led experience through reels and posts
- Promote teamwork and learning outside the classroom
- Run quizzes, challenges and live sessions to bring people in

Sponsors and industry professionals

- Show brand-visibility opportunities through high-quality assets
- Lead with ROI — reach, impressions, engagement
- Highlight innovation, sustainability and inclusivity
- Offer tailored collaboration ideas rather than a generic ask

Educators and schools

- Present STEM Racing as a genuine teaching tool
- Emphasise the skills it builds — communication, design, finance, marketing
- Offer content they can share with their own students
- Position Inferno as a model for hands-on learning

Parents and guardians

- Share growth stories — teamwork, time management, resilience
- Reassure on academic balance and responsible social media use
- Show real-world impact through competition and industry links

General public and online community

- Use trends and shareable formats to widen reach
- Promote causes we care about — women in STEM, sustainability
- Tell the human side of racing: the failures as well as the wins
- Point people to our live site — infero-racing.vercel.app

THE R.A.C.E. FRAMEWORK

We built our marketing around four stages that mirror how someone actually moves from first seeing us to genuinely backing us.

R - REACH

- Trending racing audio on Reels to showcase the build, failures included
- Teasers and countdowns before every launch
- Behind-the-scenes content showing the actual effort
- Collaborations with other STEM teams to widen reach
- Tag sponsors in stories so their involvement is visible

A - ACT

- Reels, interviews and BTS video with the team, messy parts left in
- Co-branded posts that reach several audiences at once
- Highlight sustainability, diversity in STEM, student leadership
- Hold tone and design consistent across everything

C - CONVERT

- A sponsor pitch built on our real reach, not vague promises
- Merchandise pre-orders using limited-drop tactics
- Polls and Q&As to keep the community involved
- Build footage that shows the work behind the brand

E - ENGAGE

- Invite people in through polls, Q&As and story templates
- Repost and celebrate community reactions
- Host live sessions with the team
- Reply to DMs, comments and mentions so followers feel seen

OUR TARGETS, AND WHERE WE LANDED

A strategy without numbers is just intention. We set measurable goals at the start of the season and tracked against them.

Objective	Target	Actual	Status
Instagram followers	100	146	Exceeded
Accounts reached, 30 days	10,000	27,892	Exceeded
Audience based in India	Majority	91.30%	Met
Core audience aged 18–24	Primary segment	46.50%	Met
Sponsors secured	5	8	Exceeded

Setting the targets low enough to be realistic but high enough to matter meant we could show a sponsor exactly what their visibility was worth, rather than promising vaguely.

CAMPAIGN PHASES

Phase 1 — Pre-competition

Brand identity development · social media launch and content pipeline · sponsor outreach with pitch deck · portfolio and marketing collateral

Phase 2 — Competition season

Real-time content — race prep, pit updates, team activity · live engagement during the event · sponsor promotion across all assets · networking with judges and teams

Phase 3 — Post-competition

Results and performance storytelling · sponsor appreciation · recruitment content for next season · knowledge transfer and brand continuity

SPONSORSHIP

SPONSOR HIERARCHY

We built a tiered system so every partner gets clear, proportionate benefits for what they put in. Nobody has to guess what their money bought.

Principal Sponsor
Logo on the car body, team uniforms, all portfolio documents, pit display and all social media. Named in every verbal presentation and press material.

Monetary Sponsor
Logo on the team uniforms, pit display and social media, and named in a verbal presentation. Car body placement was available to this tier through individual negotiation.

Aid Sponsor
Logo on the team apparel and pit display, with social media mentions and acknowledgement in the verbal presentation.

Partner
In-kind support rather than cash — programme delivery, materials and outreach. Logo in portfolio documents and across the social content covering our joint work.

HOW WE APPROACHED IT

- Define our objective and build a diverse prospect list
- Identify the right audience for each type of sponsorship
- Work out both the probable ROI and the creative ROI for each
- Document everything in a sponsorship prospectus
- Deliver every promised benefit after onboarding

We pitched in person rather than by email. It costs more time, but it let us build real relationships and show partners the professionalism behind the team face to face. That decision is a large part of why we secured the partners we did.

Tier	Partner	What they bring	Onboarded
Principal	Royal Enfield	Brand association and technical mentorship	Jan 2026
Principal	Lenovo	Digital display and hardware support	Feb 2026
Monetary	The Shishukunj International School	Academic funding and lab access	Jan 2026
Monetary	Airen International	Financial support	Jun 2026
Aid	Zevar	Financial Support	Jun 2026
Aid	Chopda Motors	Financial Support	Jan 2026
Aid	Balaji Group	Financial Support	Dec 2025
Aid	Tekzee Technologies	Financial Support	Jun 2026
Partner	Shri Agrawal Sweets	Catering for team events, social media collabs	Dec 2025
Partner	Raah Foundation	Sustainability programmes	Jan 2026
Partner	ANSYS	Analysis	Jan 2026

OUR TARGETS, AND WHERE WE LANDED

A strategy without numbers is just intention. We set measurable goals at the start of the season and tracked against them.

Objective	Target	Actual	Status
Instagram followers	100	146	Exceeded
Accounts reached, 30	10,000	27,892	Exceeded
Audience based in India	Majority	91.30%	Met
Core audience aged 18–24	Primary segme	46.50%	Nearly 50% of
Sponsors secured	5	8	Exceeded

Setting the targets low enough to be realistic but high enough to matter meant we could show a sponsor exactly what their visibility was worth, rather than promising vaguely.

RETURN ON INVESTMENT

WHAT EACH PARTNER GETS BACK

Sponsorship only works if both sides gain. Every partner's logo travels with content that reached roughly 27,900 accounts over 30 days — 91% of them in India, and mostly aged 18 to 24. Below is what that visibility means for each partner specifically, not a benefit copied between tiers.

Partner	Return on investment
Royal Enfield	As a principal partner, Royal Enfield's logo sits on the car body, the team jersey and across the digital content that reached around 27,900 accounts this month. That places the brand in front of judges, educators and industry professionals at the event, and a 91% Indian, largely 18–24 audience online. Association with a student-led engineering team reinforces Royal Enfield's identity as a brand that champions engineering and backs young talent.
Lenovo	Lenovo's branding runs across every digital interface in our pit display — the most technically visible space in our setup — and through our social content reaching roughly 27,900 accounts. This positions Lenovo as the technology backbone of a high-performance STEM team, at the forefront of display innovation and youth-focused advancement, with visibility extending well beyond the competition floor.
The Shishukunj International School	Our presence at a national STEM competition reflects directly on the talent the school develops. Featured across apparel, pit display and digital content seen by a predominantly young, Indian audience of around 27,900 accounts, Shishukunj's brand appears where academic excellence translates into real engineering — strengthening its reputation as a launchpad for technically driven students.
Raah Foundation	Our participation in a nationally recognised STEM competition gives Raah Foundation direct exposure to students, educators and industry observers who value innovation and social impact. Visibility across apparel, pit display and the digital content documenting our joint work — reaching roughly 27,900 accounts — positions the Foundation as an active enabler of youth-led technical achievement.
Shri Agrawal Sweets & Namkeen	As our Food & Beverages partner, Shri Agrawal Sweets & Namkeen keeps the team fuelled through long build sessions and meetings, providing sweets and refreshments for our events as an in-kind contribution. As a local brand supporting a national-level team, they gain authentic community visibility through apparel, pit display and social recognition, with our content reaching an audience 34% concentrated in Indore itself. Their support of a hardworking student team creates a genuinely relatable brand story — local roots behind national ambition, powered in part by a local business that kept us going.
ANSYS	As our analysis partner, ANSYS is credited across the engineering and enterprise portfolios as the simulation capability behind the IR-11's aerodynamic development. Association with a competition-grade car — where CFD directly shaped the wing and body design — demonstrates ANSYS's real-world application in the hands of the next generation of engineers. Visibility across our technical content and social channels, reaching roughly 27,900 accounts of a predominantly young, 91% Indian audience, positions ANSYS as the industry-standard tool trusted by student and professional teams alike.

TIERS & BENEFITS

PRINCIPAL SPONSORS— TIER 1 · ₹15,000

Royal Enfield and Lenovo hold the highest level of brand association with the team.

- Prominent logo placement on the race car body, visible to judges, educators and industry professionals throughout the competition
- Logos on every team member's jersey — present in all team photographs, video content and live interactions
- Visibility on the pit display and in all official presentations, the primary touchpoints for judges and organisers
- Featured across our social media and digital content, extending the association beyond the competition floor to the wider student and engineering community

MONETARY SPONSORS— TIER 2 · ₹10,000

The Shishukunj International School, Airen International and Chopda Motors.

- Logo placement on the team jersey and across team apparel
- Visibility on the pit display for the full competition journey
- Through individual negotiation, Chopda Motors also secured placement on the race car body — putting the brand on the car alongside our principal partners
- Brand presence during competition interactions and digital recognition across our social channels
- Shishukunj, as an academic institution, receives placement in our formal presentations and documentation, directly observed by judges and event officials

FOOD AND BEVERAGES PARTNER

Shri Agrawal Sweets and Namkeen

Shriri Agrawal Sweets and Namkeen provided our team with food and beverage refreshments throughout the duration of the event keeping us powered through all the stages of the competition and the preparation from the long nights to the afternoon meets. They get to display their brand on the national stage while engaging with STEM and reinforcing the image of the brand by supporting student initiatives in STEM. Sample of their food will be kept in the pit display as part of our giveaway items to the visitors .

AID SPONSORS— TIER 3 · ₹5,000

Balaji Group, Zewar and Tekzee Technologies.

- Brand visibility across team apparel and the pit display throughout the competition
- Representation during competition interactions
- Digital recognition through our social media and promotional content
- Their contribution documented in the team's official records for Season 08

SUSTAINABILITY PARTNER — IN-KIND

Raah Foundation.

Rather than a cash contribution, Raah partners with us on programme delivery — tree plantation drives, donation campaigns and community STEM outreach. In return they receive logo placement in our portfolio documents and across the social content covering those initiatives, consistent with the in-kind nature of the partnership.

ANALYSIS PARTNER — IN-KIND

ANSYS.

Rather than a cash contribution, ANSYS partners with us on capability — providing the industry-standard CFD and simulation tools behind our aerodynamic development. Working with the same software used by professional Formula 1 teams let us test airflow, drag and wing behaviour digitally before committing anything to manufacture. In return they receive credit across our engineering and enterprise portfolios and the technical content covering our simulation work, consistent with the in-kind nature of the partnership.

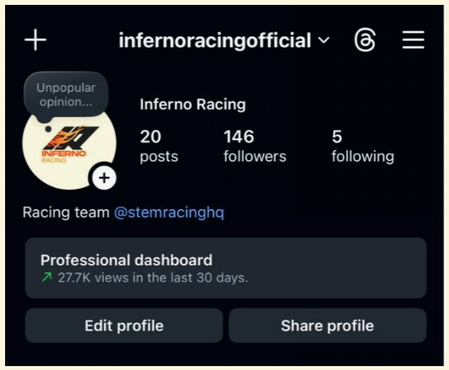
Tier	Partners	Per partner	Tier total
Principal	Royal Enfield, Lenovo	₹15,000	₹30,000
Monetary	Shishukunj, Airen, Chopda	₹10,000	₹45,000
Aid	Balaji Group, Tekzee, Zevar	₹5,000	₹15,000
Total raised			₹75,000

This ₹70,000 in secured sponsorship is the income figure carried through to our financial management on page 10. We spent ₹30,000 of it on the build, keeping our operation deliberately lean.

DIGITAL MEDIA

WHERE WE GOT TO

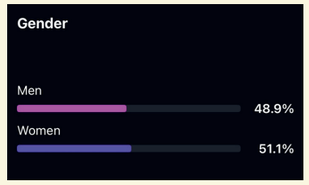
Nearly 28,000 accounts reached in a month from a team of five students with twenty posts. That number is the clearest evidence we can give a sponsor that their logo is being seen.

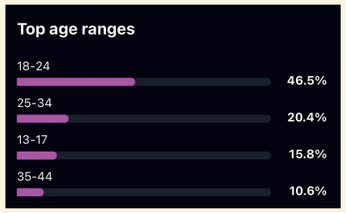


WHO IS ACTUALLY WATCHING

Reach only matters if it reaches the right people. Ours is concentrated exactly where we intended — our home city first, then the wider country.

Indore	34.3%
Delhi	3.7%
Mumbai	3.6%
Bangalore	2.3%





By age, the audience skews young — which is the point. We set out to reach students, and that is who we reached.

18–24	46.5%
25–34	20.4%
13–17	15.8%
35–44	10.6%

The split by gender came out at 51.1% women and 48.9% men — close to even, which matters to us given how much we talk about women in STEM.

OUR TWO CHANNELS

We ran two connected channels rather than spreading ourselves thin across platforms we could not maintain well.

Instagram — primary

Our main channel and the source of the reach figures above. We posted around twenty times across the season, timed to real project moments rather than a fixed schedule — a reveal when a design was ready, a build update when a part came off the machine — so each post carried something genuine rather than filler.

Team website — infero-racing.vercel.app — second channel

Our permanent home online: the full team story, sponsor recognition and portfolio material in one place a partner or judge can visit any time. Where Instagram is the feed, the site is the record — the two link to each other so traffic moves between them.

Every post and page follows one visual identity — consistent colours, fonts and tone. The content itself fell into four types:

Design reveals — 3D renders and CAD screenshots as the design phase progressed

Manufacturing updates — photos and video of the CNC process, assembly and finishing

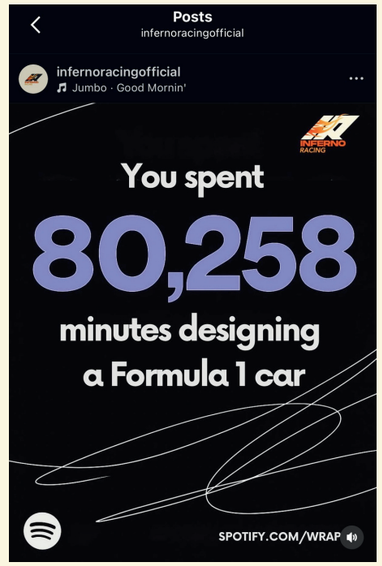
Team spotlights — short profiles of each member and their role

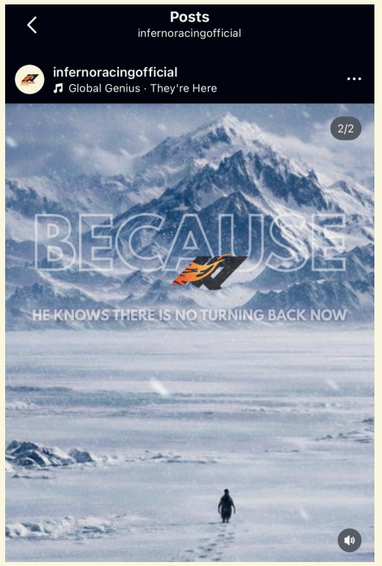
Sponsor acknowledgements — dedicated posts recognising each partner

WHY THE NUMBERS MOVED

Our growth was not accidental. We deliberately borrowed the formats people already watch — cinematic transitions, POV narratives, behind-the-scenes cuts — and used them to carry engineering content that would otherwise never leave a niche audience.

That is the real problem digital media solves for a team like ours: CFD analysis and CAM toolpaths are not naturally shareable. Wrapping them in formats the algorithm already favours is what bridged the gap between complex engineering and a mainstream feed, and it is what produced the reach our sponsors benefit from.





SUSTAINABILITY

OUR APPROACH

At Inferno Racing, sustainability is something we do rather than something we state. Our approach covers the three pillars — environmental, social and economic — and goes a step further by tying them to hands-on community work through our collaboration with the Raah Foundation.
That partnership let us grow past building a fast car. It pushed us toward being responsible innovators who give something back. Engineers of the future need to do more than solve technical problems; they have to face environmental and social ones too.

ENVIRONMENTAL — IN OUR OWN BUILD

The most honest place to look at our environmental impact is the car itself. Manufacturing produces waste, and we made deliberate choices to reduce ours.
Model-block offcuts and CNC swarf — machining two cars from solid block generates polyurethane waste. We nested our toolpaths to use as much of each block as possible and collected the swarf for disposal rather than letting it enter general waste.
Prototype material — by validating our design in CFD before cutting anything physical, we avoided the filament and material waste that comes from repeated physical prototyping. Simulation-first was an environmental choice as much as a technical one.
Material selection and outsourcing — using a single local machinist in Indore kept transport emissions low compared with shipping parts across the country, and concentrated our manufacturing footprint in one place.
Reusing display materials — the recycled materials sourced for our pit display (see page 10) kept that build out of the waste stream and out of our budget at the same time.

ENVIRONMENTAL — IN THE COMMUNITY

Alongside our own build, we worked with Raah Foundation on tree plantation drives. It is the same principle we use in car design — be as efficient as possible, leave the smallest footprint you can — applied to the world beyond the workshop.

What we did	Rough measure
Trees planted with Raah Foundation	≈ 50
Items contributed to donation drives	≈ 200
Volunteer hours across the season	≈ 40
Physical prototypes avoided via CFD-first design	2 full car iterations

SOCIAL

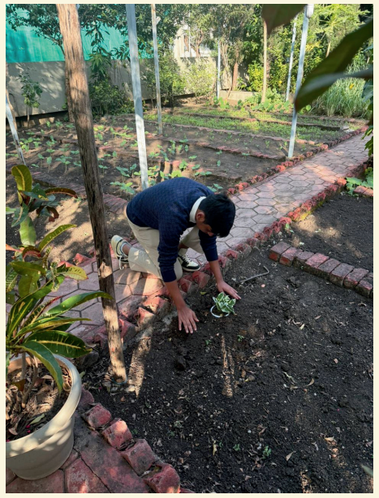
We believe real innovation lifts the people around it. Through Raah Foundation we took part in:
Donation drives — organising and contributing items to people in need
Orphanage visits — spending time with children, sharing our journey and encouraging curiosity about science and technology
STEM inspiration — showing communities that STEM is not confined to a classroom and can create real-world impact
These experiences built empathy, leadership and teamwork — qualities that matter as much to an engineer as to an entrepreneur.

ECONOMIC

Our sustainability work also had to be financially responsible. Doing good and spending sensibly are not opposites.
Collaborative impact — partnering with Raah let us maximise social impact without a heavy financial burden, an efficient use of resources
Budget discipline — every activity was planned inside our project budget, so social work never became overspending
Sustainable partnerships — building a relationship with an organisation like Raah opens the door to longer-term work, making future initiatives more scalable
Value creation — success is not only measured in financial terms, but in the value created for the people around you

Why it belongs in a racing portfolio

High performance, high impact — the same discipline that produces an efficient car can produce efficient social solutions
Engineering with purpose — our work with Raah reflects the idea that engineering is not isolated. It exists to improve lives.
The next generation — by building sustainability into both our technical and social work, Inferno Racing represents engineers who are innovative, responsible and community-driven



PIT DISPLAY

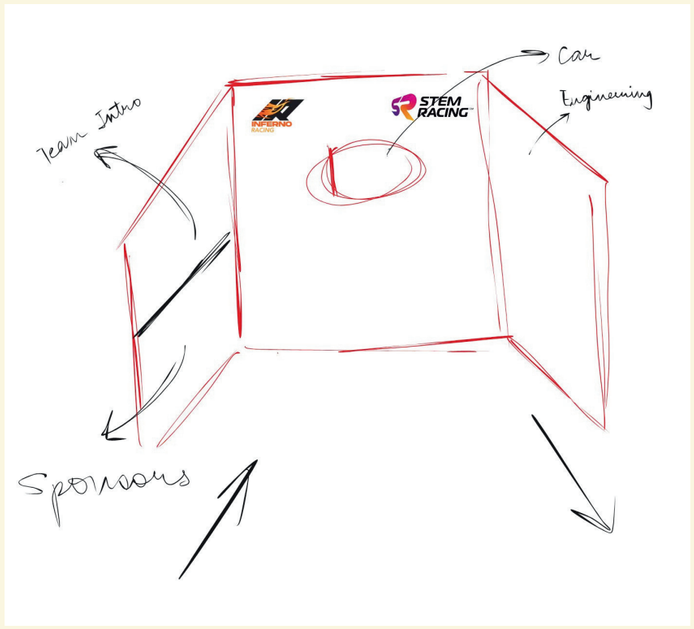
CONCEPT AND PLANNING

The pit display is the physical face of Inferno Racing. It brings our branding, the car's engineering and our business side into one experience a visitor can walk through in under a minute.
Our goal from the start was a display that looks good but stays easy to read — informative without overwhelming anyone standing in front of it.

During planning we worked through several layouts: flat panels, cube shapes, interactive zones. We weighed how easily it could be carried, how it fits the space allowed, and how the eye moves across it. We landed on a three-panel wraparound, which let us:

- Create a clear flow of information from left to right
- Use all the vertical space the competition rules allow
- Stay visible from several angles in a busy pit hall
- Keep setup and takedown quick

We put real effort into consistency — our colours, our fonts and our racing patterns appear on every panel, so the whole thing reads as one finished product rather than three boards pushed together.



FINAL DESIGN

The finished display walks a visitor through the Inferno Racing story in order — identity and brand, then the engineering, then the results.

Left panel — Team & SponsorsThe "Meet the Team" section introduces each member with their role and a short description, which makes us approachable rather than anonymous. Sponsor logos sit where they are easy to see, delivering the recognition we promised. The layout stays clean enough to read from an angle.

Centre panel — Brand & CarThe main visual anchor for the whole pit area. A large, high-quality render of the car grabs attention immediately, alongside our branding, logo and tagline. We kept text to a minimum here so attention stays on the car itself.

Right panel — EngineeringThe technical journey: CAD imagery, development stages and short explanations of how the car performs. We deliberately kept this brief so it complements the Design & Engineering portfolio rather than duplicating it — enough to show the car is built on real work.

INTERACTIVE ELEMENTS

We wanted visitors to do something at our pit, not just read it. Two elements were built for this.
3D Car Viewer — A tablet-mounted interactive model of the IR-11 that visitors can rotate, zoom and inspect from any angle. This lets us show the underbody tunnel, the halo-to-body transition and the internal chamber geometry — features that are invisible on the physical car sat on its stand, but which represent the majority of our engineering effort.
Reaction Time Test — A start-light sequence that measures a visitor's reaction time in milliseconds and displays it against our own drivers' times on a running leaderboard. Reaction Racing is worth 105 points at competition, and this gives visitors an immediate physical feel for how narrow those margins are. It also creates a reason to return to the pit, as visitors come back to beat their score.

GIVE-AWAYS

Our give-aways were chosen to be useful rather than disposable, so they carry the Inferno Racing brand beyond the event rather than ending up in a bin at the end of the day.
Branded water bottle — An item which is reusable and was selected for its longevity as a brand carrier. This is the same we have distributed through our local community outreach, which keeps our identity consistent across every audience we engage with rather than treating the competition as a separate exercise.
Shri Agrawal Sweets samples — Offered at the pit as a brand outreach activity for one of our sponsors, giving visitors a direct experience of the partner's product. This delivers tangible return on investment to Shri Agrawal beyond logo placement, while giving visitors a reason to stop at our display in the first place.

FINANCIAL MANAGEMENT

HOW WE MANAGED MONEY

Managing finances responsibly is a core part of the STEM Racing enterprise challenge. From the outset we used a zero-based budgeting approach: every rupee had to be justified against either car performance or brand visibility before it was allocated.

The budget was tracked in a central ledger updated weekly, which meant we could see overspending in a non-critical area before it became a problem rather than after. Our R&D and marketing sides worked together so every expense was documented and defensible.

KEY FINANCIAL DECISIONS

Every expenditure was judged on return — either seconds off the track time, or professional impact for the brand.

1 · Investing in high-precision CNC machiningDecision: allocate the largest single share of the budget to external CNC manufacturing.
Why: hand-finishing is cheaper, but the tolerances a competitive car needs require industrial-grade machining. This spend is what kept our physical car matched to our CAD design, and therefore kept our aerodynamic work meaningful.

2 · Eliminating software costDecision: use Autodesk Fusion 360 and SimScale on academic licences.
Why: free educational tiers removed software overhead entirely. Those funds were redirected into machining and contingency instead — a straight transfer from a cost that added nothing visible into one that did.

3 · Lean pit display and logisticsDecision: source recycled materials for the pit display and use school-provided transport.
Why: pit displays can absorb a large share of a small budget. Keeping production lean let us prioritise the technical build over cosmetic spend, without losing visual impact.

INCOME

We raised ₹70,000 in cash sponsorship across our three paid tiers, plus in-kind support from our sustainability partner. This is the same figure detailed on page 6.

Source	Detail	Amount (₹)
Principal sponsorship	Royal Enfield, Lenovo — ₹15,000 each	30,000
Monetary sponsorship	Shishukunj, Tekzee, Chopda — ₹10,000 each	30,000
Aid sponsorship	Shri Agrawal Sweets, Balaji Group,Zevar — ₹5,000 each	15,000
In-kind	Raah Foundation — programme delivery	—
Total income		75,000

EXPENDITURE

We spent ₹30,000 of the ₹70,000 raised. Keeping the build lean was a deliberate choice — every rupee was justified against car performance or brand visibility before it was allocated. Confirm the exact split against your ledger before submitting.

Category	Detail	Amount (₹)
Manufacturing	CNC machining, both cars (negotiated down from ₹25,000)	23,500
Materials	Finishing, paint, decals	2,000
Marketing	Branding and print materials	500
CAD / simulation	Fusion 360 and SimScale — free educational licences	0
Contingency	Reserved for final assembly	1,000
Total expenditure		27,000

FINANCIAL MANAGEMENT

TEAM OVERVIEW

Inferno Racing is a team of students from Shishukunj International School, Indore. Each member holds a clearly defined role aligned with the technical and enterprise demands of STEM Racing India. Roles were assigned based on individual strengths, interests, and prior experience, and were formalised at the team kick-off meeting at the start of the project.

ROLES & RESPONSIBILITIES

- Design Engineer —
  - Responsible for CAD modelling using Fusion 360, detailed component design, and the overall development of the vehicle, including refining geometry for performance, ensuring design feasibility for manufacturing, and coordinating with other team areas to achieve an efficient and optimised final design.
- Computational Engineer. —
  - Responsible for conducting CFD simulations using SimScale, analysing airflow behaviour around the car, and designing aerodynamic components such as wings, with a focus on reducing drag and improving overall performance.
- Marketing Manager —
  - Responsible for outreach, developing and leading marketing efforts to enhance team visibility and brand identity.
- Sponsorship & Marketing Manager —
  - Responsible for sponsor outreach, developing professional proposals, managing budgeting and financial planning,
- Research & Development Lead —
  - Responsible for conducting design research, testing concepts and components, analysing performance data, and implementing continuous improvements to optimise the car's efficiency and competitiveness.

Our team follows a non-hierarchical structure where all members work at an equal level, without any rigid chain of command. While each person has a defined role based on their strengths, all major decisions are made collaboratively, ensuring that everyone's ideas and perspectives are considered hence inclusivity. This creates an environment of open communication, mutual respect, and accountability, where each member feels equally responsible for the team's performance. As a result, we are able to work more efficiently, support each other across different areas, and maintain a strong sense of unity throughout the project.

MEET OUR TEAM

VISHESH DAGRA

Hi, I'm Vishesh, the Computational Engineer. I run the simulations and crunch the numbers that tell us how the car will really behave — drag, airflow, performance — long before it ever touches the track. My job is making sure what we build isn't just fast on paper, but fast for real.

ANSH AGRAWAL

i'm Ansh Agrawal, Marketing and Sponsor Manager at Inferno Racing. I turn speed into stories, partnerships into power, and attention into action. From pit to podium, I make sure the world sees, remembers, and backs the fire we bring to the track.

DAKSH FIRODA

Driven by data and obsessed with speed, I'm Daksh Firoda, R&D Engineer at Inferno Racing, where numbers tell stories and speed listens. I shape bold ideas into wind-cheating designs, hunt performance relentlessly, and engineer results that make fast look like the baseline.

YUVRAJ NIKUM

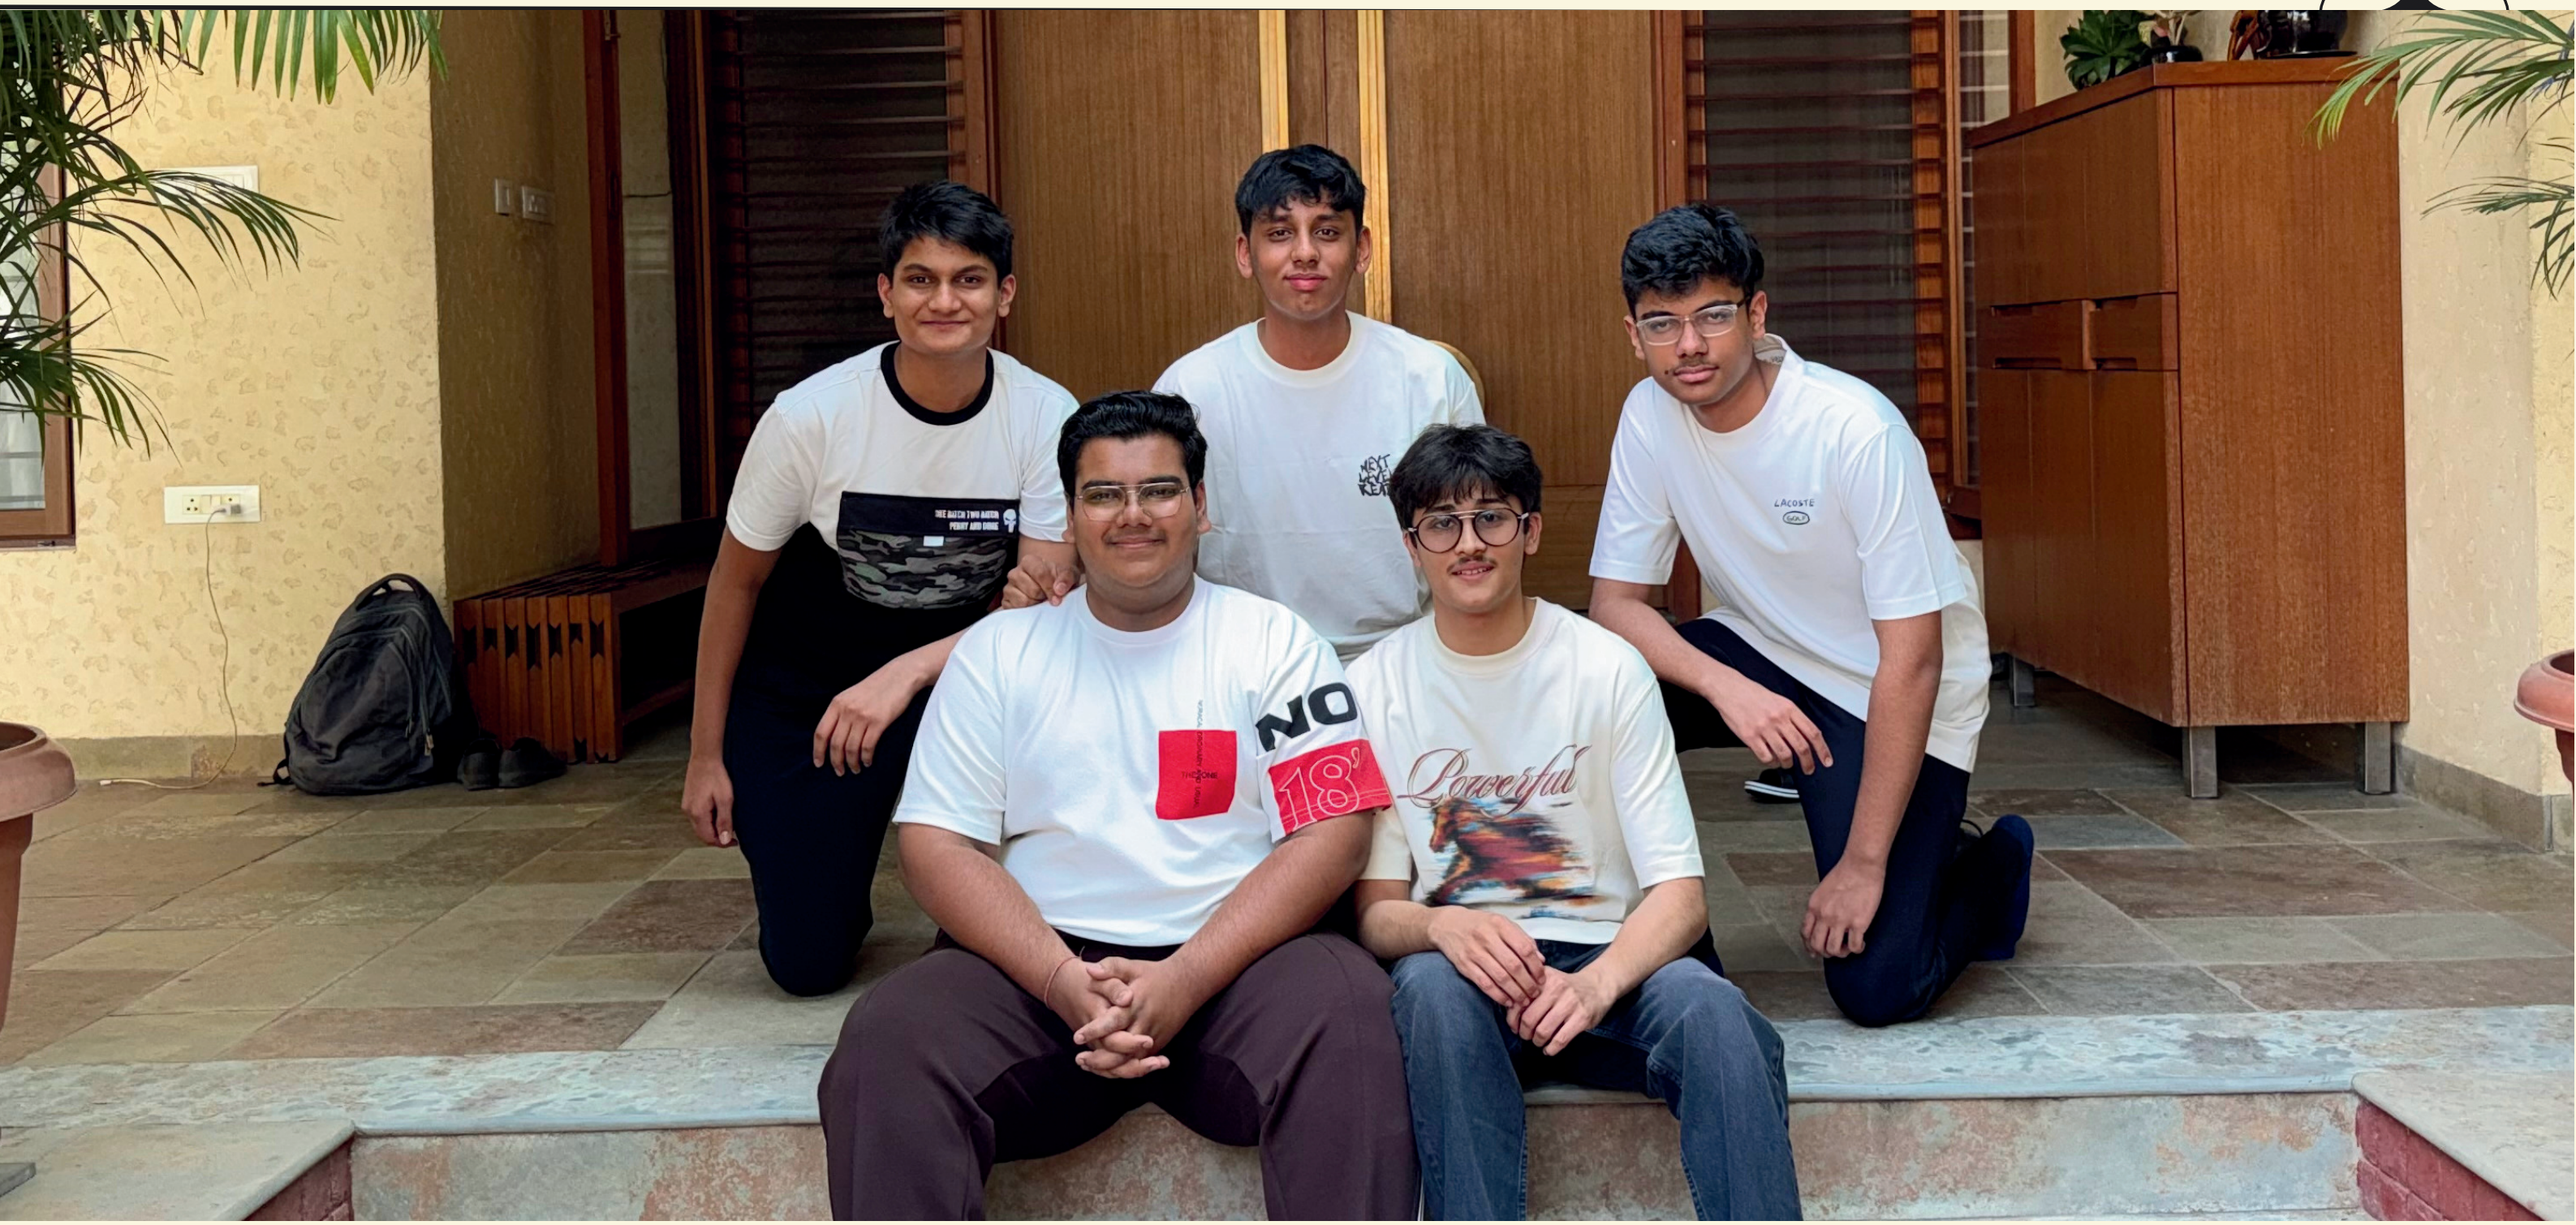
Hi, I'm Yuvraj, the Marketing Manager. I make sure the world sees, remembers and backs the fire we bring to the track — handling sponsor outreach, building relationships that keep us funded, and telling our story across social media and beyond. If the world knows Inferno Racing, it's because we made sure of it.

ANAY MEHTA

I'm Anay mehta, Design Engineer at Inferno Racing. I turn wild concepts into sleek, aerodynamic realities. Every curve, every edge, every detail is crafted not just to perform—but to make rivals question how we make it look that effortless.

INFERNO RACING

THE TEAM



INFERNO RACING

STEM RACING™
